

Elevator Pitch:

It a production business. I want start a new business in Afghanistan, glass production. For this work, I have three steps and I should do every steps too much correctly.

1. Buy glass from those who import it and sell it to the market
2. Import glass by myself
3. Glass producing

It is my generally plane; I have done **70%** of the first step. This business is not easy, it will takes long time it has too much challenges and it needs a lot of money. I should work hard to do it; I should study about the glass and producing the glass. This business will help our country economic a lot. We will cover around the country to sell our products. I chose this product because it is basic needs for us and it has too much profit. My next plane is importing the glass to make good connection whit factories they are producing it and find money for producing in here. I will produce every types of the glass but the first, I want start producing the simple types. This product will have a good profit because our country is developing and we will have many constructions. It will be the important product in future.

Problem:

Everyone know about the all problems in Afghanistan, one of these problem is economic problem. It has deferent parts; my focus is more on imports and products. We chose a very easy way by importing everything from other countries. In fact, we are helping the other countries economic. We should think about this big problem and solve them as soon as possible. We have to pay attention to the products that we need and the basic need for us and produce these products in Afghanistan. In here, we have factories but some of these products are not necessary, it is not a basic needs. I want to solve one of the basic needs. By producing products that are a basic need, we can help our country economy. How long do we have to import everything from other countries? We should work for our country, our people and ourselves. I want produce glass in here. For what? Our country is developing and we see a lot of construction every day and glass is one of the basic need for us. We all know we have a long way to go, so we have to take important steps to be one of the best countries in the future. I have three main goals in my business.

1. Find money and work for myself
2. Helping my country's economy
3. Creating jobs for my people

The Proposed Solution:

In the context of Afghanistan's trade and economy, it should be noted that we can solve our daily problems by importing products from other countries, but we cannot solve fundamental problems. We need to work on this and support those who want to work for Afghanistan's economy and future. There will be a lot of financial aid for Afghanistan. However, none of this help is used properly; this program must be worked on carefully. Many citizens like me want to serve Afghanistan fundamentally, in addition to being good for us. This class needs a lot of material and spiritual support. The ground for the growth of their work must be improved. It is true that they want to work, but they need more training because the situation in Afghanistan is not very normal. They should be aware of any issues. The government and banks can also be very helpful in this area.
